

Project Name: LaunchPad AI

Team Members: Chanchal Patni, Shilpa Kumari

Max Marks: 4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

- "Market research takes too long and hiring consultants is completely out of my budget right now."
- "I need a tool that gives me clear validation data and accurate feasibility metrics before I code anything."
- "I wish there was an automated dashboard that does SWOT analysis instantly."

THINKS

- Is this startup idea actually viable, or am I going to lose my savings?
- How can I trust automated AI models over regular, long-form manual market research reports?
- I need to optimize my business pitch flow quickly before the incubation application deadline closes.

PERSONA: EARLY-STAGE ENTREPRENEUR / STUDENT INNOVATOR

DOES

- Spends endless hours searching through separate online articles for basic competitor analysis.
- Manually tries to construct unstructured spreadsheets to draft a cohesive business strategy model.
- Tests different idea keywords inside standard web engines to eyeball market demand indicators.

FEELS

- **Anxious** about the high risks and financial uncertainties tied to unvalidated tech launches.
- **Overwhelmed** by the sheer volume of separate frameworks required for a valid business presentation.
- **Hopeful** that a single, generative dashboard will simplify their entire planning workflow.
