Chanchal Patni, Shilpa Kumari

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Input & Configuration	Stage 2: AI Report Generation	Stage 3: Evaluation & Deployment
Actions What does the customer do?	User arrives on the dashboard via the Ngrok link, configures their startup business profile, and submits the initial concept description fields.	User waits while the Flask server orchestrates prompt sequences and triggers Gemini 1.5 Flash to compute viability indicators.	User reviews the detailed interactive summaries, downloads or references the SWOT insights, and shares the public URL with potential evaluators.
Touchpoint What part of the service do they interact with?	Web Interface landing page, project input forms, validation parameter text boxes.	Dynamic interactive dashboard loading cards, status spinner elements.	SWOT result grids, business score modules, growth strategy cards, active Ngrok tunnel link.
Customer Thought What is the customer thinking?	"Is this layout simple enough? Will it accept my long unstructured business ideas without throwing token limits?"	"How long is this generation engine going to take? Are the backend prompt structures effectively examining my industry space?"	"These viability reports are incredibly thorough! This framework gives me exactly what I need to patch holes in my pitch deck."
Customer Feeling What is the customer feeling?	Hopeful yet skeptical about the platform's analytical accuracy.	Anxious or impatient during the processing state interval.	Relieved and empowered with structured market strategies ready for execution.
Process Ownership Who is in the lead on this?	Frontend UI / UX Track Lead	Core AI Engine & Backend Infrastructure Developer	DevOps Deployment & QA Coordinator
Opportunities How can we improve this stage?	Add structural text placeholder templates and smart inline tooltips to help users formulate clearer business ideas.	Implement step-by-step progress checklists (e.g., "Analyzing Competitors...", "Structuring SWOT...") to reduce perceived waiting duration.	Integrate immediate one-click 'Export to PDF/JSON' layout commands so users can effortlessly save generated metrics offline.
