Problem-Solution Fit Canvas

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS]	6. CUSTOMER LIMITATIONS [CL]	5. AVAILABLE SOLUTIONS + PROS & CONS [AS]	
• Early-stage entrepreneurs and technical founders turning rough tech ideas into business plans. • Incubators and pitch evaluators looking for a quick, objective way to filter concept viability.	Budget & Hardware constraints: • No budget for deep enterprise validation platforms or expensive market consultants. • Operate on standard consumer laptops; need light web tools over complex local set ups.	• Manual Consultation: Thorough, customized metrics but highly expensive and slow. • Standard Search Tools: Free and readily accessible, but inputs remain totally unstructured, lacking systematic synthesis or SWOT grouping. • Generic LLM Prompts: Fast responses, but suffer from formatting drift and lack domain-specific parameter tracking.	
2. PROBLEMS/PAINS + FREQUENCY [PR]	9. PROBLEM ROOT / CAUSE [RC]	7. BEHAVIOR + INTENSITY [BE]	
• Frequency: Encountered with every single early business iteration or pivot loop. • Unstructured business statements make it hard to pitch cleanly to investors. • No direct access to rapid, automated SWOT metrics and target strategies.	• Absence of an accessible engine to process unstructured ideas into formalized indicators. • Traditional business research loops demand high capital and extensive domain familiarity.	• Intensity: Critical; dictates if an idea is discarded or moves to fundraising. • Founders manually cobble data from scattered sources, wasting valuable development days.	
3. TRIGGERS TO ACT [TR]	10. YOUR SOLUTION [SL]	4. EMOTIONS BEFORE/AFTER [EM]	
• Preparing for an upcoming pitch or hackathon screening threshold. • Receiving immediate pushback from an evaluator due to hidden market risks.	LaunchPad AI Framework: • An automated Flask analytics dashboard running via responsive Ngrok secure endpoints. • Uses orchestrated prompt chains on Gemini 1.5 Flash to process rough text inputs instantly. • Generates structural market summaries, interactive SWOT grids, and key monetizing guidelines in seconds.	Before: Anxious, confused. After: Empowered, strategic, relieved.	
		8. CHANNELS OF BEHAVIOR [CH]	
		Online: Git repositories, web links. Offline: Incubation sessions, team syncs.
