

Project Name:	LaunchPad AI	Team Members:	Chanchal Patni, Shilpa Kumari
Maximum Marks:	5 Marks		

Solution Architecture Diagram

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Renders the dynamic user-facing interface, displays business plan metrics, captures raw tech ideas from entrepreneurs, and generates structured analytical views or interactive SWOT matrices for evaluators.	HTML5, CSS3, Tailwind CSS, JavaScript
API Gateway	Manages incoming validation requests, orchestrates request routing to the underlying core logic processes, tracks secure endpoint communication, and interfaces locally running app ports with public web tunnels.	Flask Engine, Ngrok Tunneling Engine
Microservices	Handles prompt execution setups, validates structural text input limits, runs business feasibility assessment steps, and formats analytical criteria schemas before delivery to the storage tier.	Python (Flask API Core Modules)
Database	Stores transaction metadata blocks, structures lightweight user configurations, manages session validation attributes, and tracks application configuration settings over a small-footprint storage interface.	SQLite Relational Store
External Integrations	Evaluates the raw text input files using automated prompt structuring, processes multi-layered viability data metrics, and provides rapid inference response blocks to fuel deep SWOT matrices.	Google Gemini 1.5 Flash API
