

AI Tools Used

LaunchPad AI — Project Documentation

AI tools and platforms used across the LaunchPad AI project lifecycle, their specific application, and the impact each had on the build.

S. No	AI Tool / Platform Name	Specific Use Case / Application	Project Phase Applied	Impact / Benefit
1	Claude (Anthropic)	Generated the complete modular Flask codebase — app.py, services/ai_engine.py, templates/index.html, static/css and static/js — including the structured Gemini prompt design, JSON validation logic, and setup documentation	Development Phase	Took the project from idea to a fully working, deployable app in a single session; eliminated most boilerplate writing
2	Google Gemini 1.5 Flash	Powers the core product feature itself: analyzes the user's startup name, description, audience, and business model, and returns structured JSON with viability_score, innovation_score, swot, market_insights, and growth_strategy	Core Product Feature (Runtime)	This is the engine behind every analysis LaunchPad AI generates for end users — without it, the app has no core functionality
